

ALFIDO TECH — INSTAGRAM DATA ANALYSIS & CONTENT STRATEGY

One-page strategy document | Source: Instagram project notebook and seven supplied CSV tables | September 2026

1. Executive Findings

- **Dataset scale:** 100 users, 257 posts, 8,782 likes and 7,488 comments, producing **16,270 total engagement interactions**.
- **Content:** Photo posts had the highest observed average engagement at **63.5 interactions/post**; video and carousel were close at about 63.0.
- **Discovery:** **33.4%** of likes came from non-followers, creating a measurable opportunity to convert discovery into followers.
- **Community signal:** Active followers showed a **0.444 correlation** with total engagement across account owners.
- **Hashtags:** Among tags appearing on at least five posts, **#delicious, #beauty, #foodie, #sunset and #stunning** had the highest average engagement associations.

2. Recommended 4-Week Posting Test

Day	Test time	Format / theme	Purpose & KPI
Monday	12:30 PM	Educational carousel	Practical data/AI concept Saves, comments
Wednesday	6:30 PM	Photo / project proof	Show result, workflow or intern success Shares, profile visits
Friday	7:30 PM	Short video / Reel	Fast tip + strong opening hook Reach, non-follower likes
Sunday	11:00 AM	Community post / poll	Focused question + rapid replies Comments, active followers

3. Five Engagement Strategies for Alfido Tech

- **Test the content mix:** Center the next month on the strongest observed format while reserving at least 25% of slots for challenger formats; compare median engagement as well as averages.
- **Use controlled hashtag sets:** Combine 2–3 evidence-led dataset tags with 2 niche Alfido Tech tags and rotate sets across comparable posts.
- **Convert discovery into followers:** Add a specific CTA such as “Follow for weekly data-project walkthroughs” and measure profile-to-follow conversion.
- **Engineer early conversation:** Ask one answerable caption question and respond during the first hour; track unique commenters and comment-to-like ratio.
- **Build a measurement loop:** Capture real publish time, reach, impressions, saves, shares, profile visits and follows gained; rerun the analysis after 30–50 new posts.

4. Measurement & Deployment Note

Posting-time limitation: Every supplied post timestamp is identical (13-Apr-2023 08:04). Therefore, the four times above are **test hypotheses, not historical optimum times**. Record actual future publish timestamps and compare equivalent posts over several weeks before adopting a fixed schedule. The notebook’s high-engagement classifier is also a prioritization aid rather than a guarantee; validate it on future real Alfido Tech data.

Primary KPIs: Engagement/post • Engagement rate • Non-follower likes • Comments • Shares • Saves • Profile visits • Follows gained
